

AI Design & Deployment

 straive.com/ai-design-deployment

December 4, 2024

Accelerate your journey to becoming an AI-first company.

Operationalize and embed AI into every business function

Delivering impact with our services

Developed learning content to empower learners in real-time.

We enabled a leading U.S. EdTech provider to develop learning content for a new AI-enhanced conversational learning platform with AI-enabled solutions for 26+ science and engineering subjects.

Enabled accessibility enhancements across diverse educational materials

Our solution helped a prominent U.S.-based education publisher generate 2.3 million+ image descriptions and remediate 50,000+ pages and slides to drive higher accessibility for students

Services that augment your AI capabilities

AI Infrastructure Setup

Build robust LLM/AI models, efficient data curation pipelines, and the right data foundations to seamlessly deploy high-performing AI solutions across your business processes.

AI Training

Develop comprehensive knowledge packets for model training and achieve precise data annotation to ensure high-quality, domain-specific AI models that deliver accurate insights for intelligent decision-making.

AI Development & Training

Continuously optimize AI solutions through advanced prompt engineering and fine-tuning of LLMs, ensuring high-performing models that deliver precise, context-aware insights and enhance decision-making across business functions.

AI Deployment

Seamlessly embed and operationalize AI into your existing systems and workflows with robust integration frameworks and monitoring tools that ensure consistent performance, reliability, and full control over model behavior and business impacts..

Enhancing outcomes for your industry

The exponential growth of complex research data, siloed knowledge across institutions, and the increasing pressure to accelerate breakthrough discoveries are some of the key challenges faced by businesses in this domain.

By integrating AI-powered solutions into research workflows, your organization can significantly enhance its ability to process and analyze vast datasets, identify patterns, and generate new hypotheses. Through operationalizing AI, you can accelerate scientific discovery, reduce costs, and drive impactful innovations faster

Our AI design & deployment services enable your business to proactively solve challenges like optimizing route planning, enhancing demand forecasting, and improving inventory management. Our ability to create scalable and secure AI models tailored to your specific needs ensures efficiency with real-time tracking and predictive maintenance capabilities. Our solutions help you reduce costs, improve delivery timelines, and enhance supply chain resilience, enabling your businesses to adapt quickly to the evolving market demands.

At Straive, we leverage our expertise in deploying AI-driven solutions to help you build educational content to learner needs and automate administrative tasks for greater efficiency. Our solutions help you proactively tackle challenges across personalized learning experiences, content recommendations, and student performance analytics. By operationalizing our solutions into your workflow, we help you drive tailored learning journeys, improving outcomes for both educators and students.

AI-led solutions can enable your business to consistently address critical challenges, like fraud detection, risk management, and predictive customer insights. Our custom AI models and scalable deployment strategies enable you to optimize resource allocation, enhance compliance, and deliver personalized financial services, leading to unique customer experiences, increased operational efficiency, and minimized risks.

Our AI Design & Deployment services help you address critical challenges across drug discovery acceleration, personalized treatment development, streamlining

clinical trial operations, and more. We help you identify impactful AI applications, like predictive modeling for patient outcomes and automating regulatory compliance processes, ensuring every solution is secure, impactful, and scalable. Our tailored AI capabilities empower you to optimize research processes, enhance precision in decision-making, and reduce time-to-market for your products to boost your competitive advantage.

At Straive, we leverage our expertise to identify high-impact AI use cases tailored to your dynamic needs and develop scalable solutions that align with your business goals. By operationalizing custom AI models with robust security, we empower you with the tools to predict trends, enhance customer satisfaction, and maximize resource efficiency. Our services, hence, enable you to drive innovation, enhance revenue growth, and build strong brand loyalty in a highly competitive market.

Offering Highlights

AI-powered platforms

Integrate legacy systems with AI for a scalable, future-proof transition.

AI Deployment

Seamlessly integrate AI into your existing system with robust tools for reliable performance and full control.

AI Infrastructure Setup

Build powerful LLM/AI models and data pipelines for seamless, high-performance business solutions.

Thought leadership

Short Read

From automation to autonomy: The future of AI in supply chains

As AI reshapes the industry, manual processes are replaced by predictive and real-time decision-making capabilities, such as demand forecasting and route optimization.

Empowering data analytics with Generative AI's best practices

Generative AI emerges as the key to unlocking a realm of new possibilities, profound insights, and unprecedented efficiencies within the realm of data analytics.
