Why Customer Experience Matters for Modern Businesses

Our Customer Experience Services

Customer Journey Mapping & Optimization

Omnichannel Experience Design

CX Consulting & Implementation

CX Improvement & Optimization

Voice of Customer (VoC) & Feedback Analytics

CX Measurement & Improvement

Our Customer Journey Mapping & Optimization services turn data into actionable journey intelligence. We analyze customer behaviors, expectations, and emotional triggers to design seamless, omnichannel experiences that strengthen connections at every stage. By identifying moments that matter and removing friction, Straive enables brands to deliver cohesive, predictive, and high-value interactions across channels and touchpoints.

AI-Powered Omnichannel CX

Straive's AI-led CX solutions integrate intelligence, automation, and analytics to elevate engagement across the entire customer lifecycle.

[AI Native Contact Center](#) [Customer Experience Analytics](#) [Customer Experience Transformation](#) [Customer Experience Operations](#)

Straive's AI-powered contact center solutions redefine customer engagement through intelligent automation, predictive analytics, and natural-language understanding. Our solutions enable self-service routes, improve agent efficiency, and deliver personalized support at scale. With real-time insights, sentiment analysis, and workflow automation, enterprises can transform support centers into AI-native hubs of proactive, data-driven interaction—boosting satisfaction while optimizing operational costs.

Straive's customer experience analytics solutions unify data across channels to provide a 360° view of customer behavior, preferences, and sentiment. By leveraging advanced AI models and predictive analytics, we uncover actionable insights that guide decision-making and experience design. Our analytics frameworks empower organizations to identify friction points, personalize engagement, and measure the true impact of every interaction—driving continuous improvement and optimization.

Through customer experience digital transformation initiatives, Straive helps enterprises reimagine how they connect, serve, and engage. We integrate AI, automation, and analytics into every layer of the CX ecosystem to modernize operations and improve agility. Our approach enables organizations to break silos, orchestrate seamless journeys, and deliver hyper-personalized experiences that drive loyalty, accelerate innovation, and unlock long-term business value.

Straive's customer experience operations streamline and scale enterprise delivery through multi-shore operational capabilities, omnichannel integration, and continuous optimization. We design operations that balance human empathy with machine precision—ensuring consistent, efficient, and quality-driven interactions across touchpoints. From process automation to real-time analytics, our operations enable businesses to elevate satisfaction, reduce costs, and achieve sustainable experience excellence.

AI-Powered Support Across Every Query Tier

Straive brings together AI self-service, digital workers, intelligent routing, and human expertise to resolve every customer query through the most effective pathway. Our tiered support operations framework automates routine interactions, accelerates complex

resolutions, and delivers consistent, high-quality support across voice, chat, email, messaging, and case-management channels.

03 Tier 1.5: AI Resolution with Human Oversight ›

TIER 0

Zero-Touch Self-Service

High-volume, repetitive queries are resolved instantly through always-on AI-powered self-service. When self-service cannot resolve an issue, or when a customer simply prefers human assistance, the interaction can move directly to a support professional without forcing the customer through repetitive bot loops.

SOLUTIONS

◆ **Voice and Chatbots. Self-Service Bot Suite**

Provides natural, conversational support across voice and digital channels.

◆ **Messaging Self-Service Assistant**

Enables customers to receive immediate assistance within instant-messaging experiences.

◆ **Seamless Human Escalation**

Gives customers a clear, easy path to human support whenever self-service is unsuccessful or human assistance is requested.

When a query escalates from Tier 0 to Tier 2, the full conversation history and customer context transfer seamlessly. The support professional picks up where the AI left off, so the customer never has to repeat the issue or start over.

PERFORMANCE COMMITMENTS

24/7 Availability

< 5 sec Average Response Time

Up to 45% Query Deflection

TIER 1

Autonomous AI Resolution

AI-powered digital workers manage routine interactions from intent identification and classification through resolution. They operate across enterprise channels and systems to

complete supported actions with speed, accuracy, and consistency.

SOLUTIONS

◆ **Smart Triage Engine**

Identifies intent, classifies queries, prioritizes requests, and routes every interaction intelligently.

◆ **Digital Worker for Email and Cases**

Interprets, processes, and resolves service requests across email and case-management workflows.

◆ **Digital Worker for Chat**

Conducts contextual conversations and completes supported resolution actions in real time.

◆ **Digital Worker for Voice**

Uses conversational AI to resolve voice-based customer requests at scale.

PERFORMANCE COMMITMENTS

< 90 sec Resolution

92% First-Contact Resolution

Consistent Execution Across Channels

Lower Cost to Serve

TIER 1.5

AI Resolution with Human Oversight

For queries requiring additional assurance, AI prepares or executes the resolution while a support professional reviews the outcome. This human-in-the-loop model extends automation to more nuanced interactions without compromising quality, governance, or control.

CAPABILITIES

◆ **Human Review and Approval**

Support professionals review and approve AI-generated resolutions when additional assurance is required.

◆ **Exception and Escalation Management**

Manages exceptions and escalations so complex cases receive the appropriate level of human intervention.

◆ **Policy, Quality, and Compliance Validation**

Validates AI-assisted resolutions against required policies, quality standards, and compliance controls.

◆ **Continuous Learning from Reviewer Feedback**

Uses reviewer feedback to improve future AI-assisted interactions and resolution quality.

◆ **Complete Interaction Traceability**

Maintains visibility and traceability across the complete AI and human interaction.

PERFORMANCE COMMITMENTS

< 4 hrs Review Completed

100% Audit Coverage

Greater Automation with Accountability

Improved Accuracy for sensitive or complex cases

TIER 2

AI-Accelerated Expert Support

Complex, high-value, or judgment-intensive interactions are handled by skilled support professionals equipped with real-time AI assistance. Agents receive the context, knowledge, and recommended actions they need to resolve cases more efficiently and effectively.

SOLUTIONS

◆ **Agent Assist for Chat**

Recommends responses, surfaces relevant knowledge, and guides next-best actions during live conversations.

◆ **Agent Assist for Email and Cases**

Summarizes case context, drafts responses, and accelerates resolution workflows.

✦ **WikiFlow. Knowledge Workflow Copilot**

Helps agents find, apply, and update enterprise knowledge within their existing workflow.

OPERATIONAL IMPACT

25–32% Agent Productivity Improvement

30–35% Handling Time Reduction

5–9 pts CSAT Improvement

Faster More Consistent Expert Resolution

One Connected Support Ecosystem

Across every tier, Straive connects automation, enterprise knowledge, operational systems, and human expertise within one intelligent support model. Each interaction is directed to zero-touch self-service, autonomous resolution, human-reviewed execution, or AI-assisted expert support based on its complexity, risk, customer context, and applicable business rules.

Customers are never trapped in a self-service loop. They can request human assistance at any point, while predefined escalation triggers automatically identify unresolved, complex, or sensitive queries that require expert support. When an interaction escalates from AI self-service to a support professional, its complete conversation history and context are preserved, enabling the agent to continue seamlessly without asking the customer to repeat information.

The result is a scalable customer support operation that combines machine speed and consistency with human judgment and empathy, improving resolution performance while elevating the customer experience.

Why Partner with Straive for CX Solutions

Proven Expertise Across Industries

Straive delivers tailored CX solutions across key industries, helping organizations achieve measurable improvements in customer experience and operational performance.

Comprehensive AI and Analytics Capabilities

Straive embeds AI and analytics into CX services to deliver real-time insights, automation, and smarter engagement.

End-to-End Omnichannel Support

We deliver end-to-end CX and support services that ensure seamless, high-quality engagement, driving consistency, efficiency, and measurable satisfaction.

Advanced AI & Analytics Accelerators

Our proprietary tools enable adaptive, real-time engagement, improving self-service, productivity, and value through automation and intelligence.

Global Reach with Multilingual Support

Operating in 10 countries and over 10 languages, Straive delivers consistent, high-quality engagement worldwide while maintaining local relevance and compliance.

Commitment to Continuous Improvement

Innovation drives Straive's culture, with continued investment in skills, advanced technologies, and experience-led design to create lasting value and customer loyalty.
