

GenAI Accelerator Toolkit That Don't Box You In

 straive.com/genai-solutions

April 9, 2025

Accelerate ROI with pre-built GenAI toolkits for Document Intelligence, Data Democratization, and Scalable AI Apps.

Scale Enterprise AI to New Heights

Search

Quickly find relevant information from vast datasets.

Summarize

Condense lengthy content into clear, concise insights.

Classify

Categorize data accurately based on patterns and context.

Generate

Create high-quality text, code, or content on demand.

Rewrite

Refine, rephrase, or enhance text for clarity and impact.

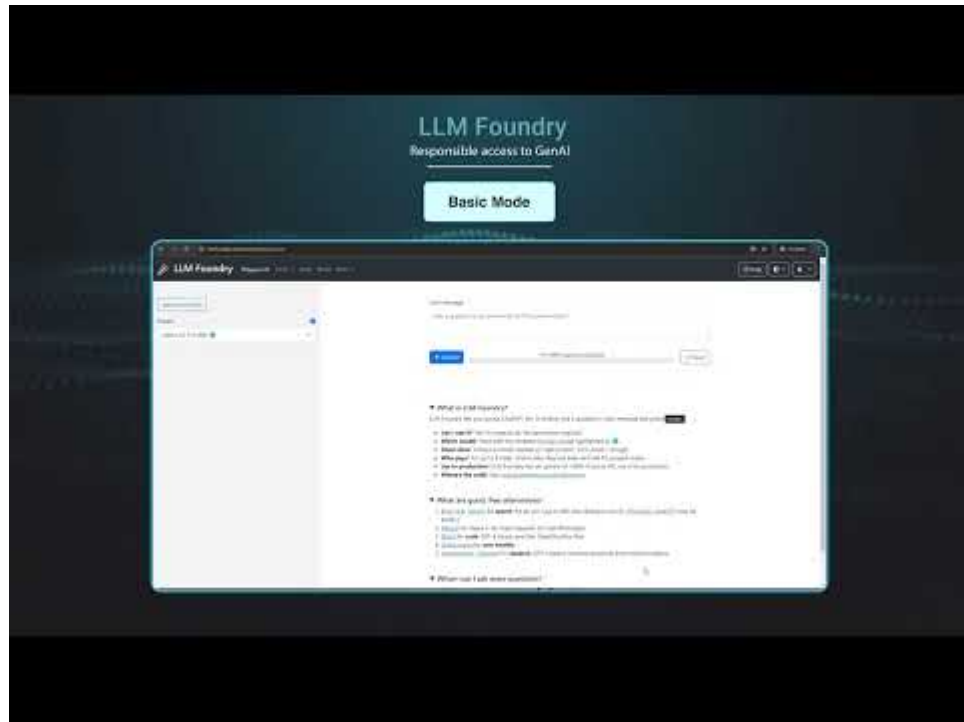

Cluster

Group similar data points to uncover meaningful patterns.

Extract

Identify and pull key details from unstructured data.

Our Modular GenAI Toolkits

DocExplore

Conversational Search/Chat

LLM Foundry

App Maker

Unstructured documents contain valuable insights, but extracting them is slow and inefficient. DocExplore leverages NLP for intelligent classification, ML and LLMs to automate analysis, and semantic Search & Graph Analytics for deep contextual insights.

We've seen our clients reducing manual effort by up to 80% and enabling faster, data-driven decisions. Whether analyzing contracts, ESG reports, or research papers, it uncovers hidden patterns and delivers actionable intelligence at scale.

What It Does:

- **AI-driven document processing** – Ingest, classify, and analyze large volumes of text.
- **Topic & entity extraction** – Identify key themes, people, and organizations.
- **Contextual search & visualization** – Go beyond keywords with AI-powered insights.

Straive's Conversational Search/Chat solutions include **DocSearch** and **DataChat**. These solutions use GenAI and natural language understanding to revolutionize how teams extract insights from documents and data.

DocSearch delivers context-aware answers and summaries from complex files like contracts and financial reports.

DataChat enables natural language exploration of structured data—no coding required.

Key Capabilities:

- Semantic search & question-answering
- Intelligent summarization
- Conversational data queries
- Real-time visual insights

LLM Foundry is a custom LLM ecosystem with multi-LLM capability, including OpenAI, Anthropic, Gemini, Grok, and more. It accelerates AI adoption by offering pre-built modules that can be customized to build any GenAI application for enterprises. Deploy LLM-Powered solutions in days, not months.

- **Pre-Built AI Skills** – Ready-to-use modules for extraction, classification, and sentiment analysis.
- **AI Sheets** – Automate repetitive data tasks like spreadsheet processing and data enrichment.
- **AI Bookmarks** – Retain contextual memory for better recall and long-term AI interactions.
- **Workflow Customization** – Create tailored AI-powered automation without coding.

Traditional AI app development is slow, expensive, and requires specialized expertise. App Maker changes this by enabling businesses to create and deploy AI-powered applications using natural language prompts—without writing a single line of code. Whether you need a

custom AI assistant, automated document processor, or data analysis tool, App Maker helps teams turn ideas into functional AI apps in hours, not months.

What It Does:

- **No-code AI app creation** – Generate apps by describing what you need.
- **Multi-LLM support** – Integrate OpenAI, Anthropic, Gemini, or proprietary models.
- **One-click deployment** – Instantly launch AI-powered tools for internal or external use.
